MEN’S PROSTATE CANCER AWARENESS CHURCH TRAINING (M-PACT) PROJECT: INTERVENTION DEVELOPMENT AND FORMATIVE RESEARCH

Darlene R. Saunders, PHD, MCHES, University of Maryland School of Public Health, Department of Behavioral & Community Health Society for Behavioral Medicine 33rd Annual Meeting 2012
Overview

- Prostate cancer disparities
- Community-based participatory research
- Spiritually-based health communication
- Formative research
- Intervention development
  - Women as health partners
  - Text messaging
Prostate Cancer

- 60% more likely to get prostate cancer than White men
- Twice as likely to die from prostate cancer

African American men are at greater risk for getting prostate cancer and may benefit from getting information that helps them make the best choice about getting screened.
Community-Based Participatory Research (CBPR)

- M-PACT is a dynamic CBPR project; community partners, co-investigators, and students are engaged in every facet, for the purpose of improving community health and reducing prostate cancer disparities.

Project Aims

- Develop a spiritually-based educational intervention to raise prostate cancer screening informed decision making among African American men 40-69 years of age

- Implement the intervention in 20 Prince George’s County churches

- Evaluate intervention impact on the primary outcome of informed decision making for prostate cancer screening
“... with all thy getting, get understanding.” Proverbs 4:7
Significance of Church

- On average, African Americans demonstrate a relatively high degree of religiosity
- Church has always played an instrumental role in the fabric of the community
- Healing place, for the soul, spirit, and body
- Offers parishioners a place to worship and to serve God by meeting the needs of those that are disenfranchised and/or individuals going through various “trials and tribulations”
- Utilized as a social network to optimize health promotion and prevention messages
Community Health Advisor Approach

- Each church will select two individuals to serve as Community Health Advisors (CHAs)
- CHAs will lead a 4-part men’s prostate health education series of group “workshops”
- CHAs will raise awareness, empower, motivate, and simulate others to make informed health decisions using spiritually based themes and scriptures
- Help parishioners get the facts on prostate cancer, learn those facts, and act on those facts!
Spiritually-based Approach

- Spirituality and health connection
  - balance – body, mind, and spirit
  - strengthening the connection

- Use of scriptures
  - “Blessed is the man who finds wisdom, the man who gains understanding”, “I can do all things through Christ which strengthens me”, “We walk by faith, not by sight.”
Spiritually-based Approach

- **Testimonials “Witnessing”**
  - “…I praise God everyday for directing my doctor to test me for prostate cancer, even when I had no symptoms”, “Being a Black man puts me at risk for prostate cancer. I started having my DRE and PSA checked every year, after I turned 45.”
  - “…At no time did I display any of the typical symptoms... just because you don’t any symptoms doesn’t mean you are not in the early

- **Application**
  - Faith can get you through your PSA or DRE test — “We know faith can work wonders”, “Faith gets us through the good times and the hard times."
Formative Research

- Advisory Panel
- Focus groups
- Cognitive Response Interviews
Advisory Panel

- 6 African American men and 2 African American women
- Church-attending
- Pastors, ministers, prostate cancer survivors, physician, family history of prostate cancer, community and civic leaders
Advisory Panel

Gave input into all phases of the project development and implementation approaches:

- Created spiritual themes
- Reviewed prostate cancer content and messages
- Provided insights to the prostate cancer educational needs of the African American church community
- Critiqued educational materials for appropriateness with target audience
- Provided input on project logo and branding
- Reviewed and assist with CHA training
Focus Groups

- Two focus groups:
  - 27 church-attending African American men
  - Governed by “Baptist Polity” – organization and traditions

- Members provided feedback on:
  - Type of information important to discuss
  - How to best raise awareness
  - Messages that would resonate with men
Themes—Prostate Cancer & Health
Themes—Attendance & Screening

- Conveniences
- Legislative support
- Pastors open
- Involved
- Faith-based
- Stationed
- Recreation
- Age-appropriate
- Sources
- Credibility
- Word
- Free
- Known
- Community
- Far
- Motivation
- Setting
- Locally
- Come
- Lot
- Center
- Away
- Use
- Anything
- Beat
- Familiarity
Cognitive Response Testing

10 church-attending African American men

- Critiqued graphic design of the booklets
- Gave feedback on the content
- Let us know if the “messages” were appropriate and acceptable
Welcome to the M-Pact (Mens Prostate Awareness Church Training) project!

In this 4-part men’s health series, you will learn about prostate cancer, and who is at risk. You will learn the pros and cons of getting tested, and where to go. In later sessions, you will learn about different options for prostate cancer treatment. We will talk about new topics in each session, so it is important for you to come to all four.

*Or do you not know that your body is the temple of the Holy Spirit who is in you, whom you have from God, and you are not your own?*

*1 Corinthians 6:19*
We endure
As men, we are used to toughing it out. We endure pain without complaint. We don’t run to the doctor for every little ache and pain. There is a lot on our minds: providing for family, keeping the lights on, making it to work on time. Missing work for a doctor’s appointment when we don’t feel sick just isn’t what we do. Being healthy means that we feel okay today.

You often hear brothers talk about “Don't go looking for problems.” Nobody wants to go looking for a problem. But think about preventive care. Preventive care is the little things you do today to avoid a big problem down the road.

Think about the maintenance that you do for a car or truck, like an oil change every 3,000 miles. We do these little things to avoid a big problem down the road. **We do maintenance so the things we value will LAST.**
Intervention Development
Women “Health Partner”

- Incorporated in study for a variety of reasons including:
  - Literature
  - M-PACT team meetings
  - Advisory panel feedback
  - Church culture
  - Enhanced research design

- Assess whether women as a “Health Partner” will influence men to make an informed decision about prostate cancer screening
Incorporate a health information technology component:

- Limited empirical studies published that address use of technology for study population and setting
- Analysis of focus group data

- Project website
- Text messaging strategy

MSG: Hello, Darlene!
Tomorrow is the first M-PACT session on
04/07/2012 at 6:00 at First Baptist Church of
Glenarden. See you there!
Intervention Development in Review

Formative Research

- M-PACT CBPR team
- Advisory Panel – spiritual content, message development, overall project guidance
- Focus groups – guided intervention content
- Developed draft educational materials
- Cognitive response interviews
- Women as Health Partners
- Health information technology
